

CRRC Census Tract Mapping

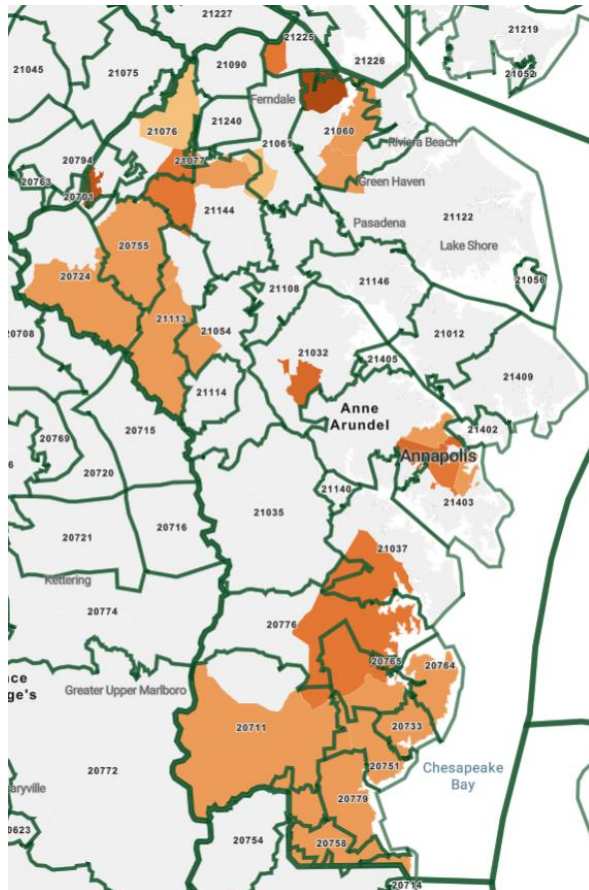

Census Tract Selection Criteria

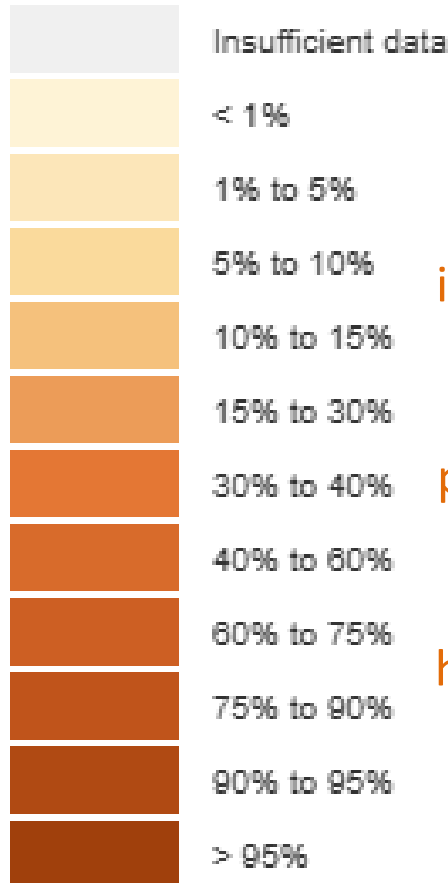

- Data from the 1980, 1990, 2000, and 2010 decennial census, as well as the 2020 and 2022 ACS (5-year estimates) to identify:
 1. Those census tracts in which the percentage of Black households was greater than the county average of Black households; AND
 2. Those census tracts in which the median household income was less than the county's median household income.

These criteria led to the identification of the following census tracts within the zip codes shown below.

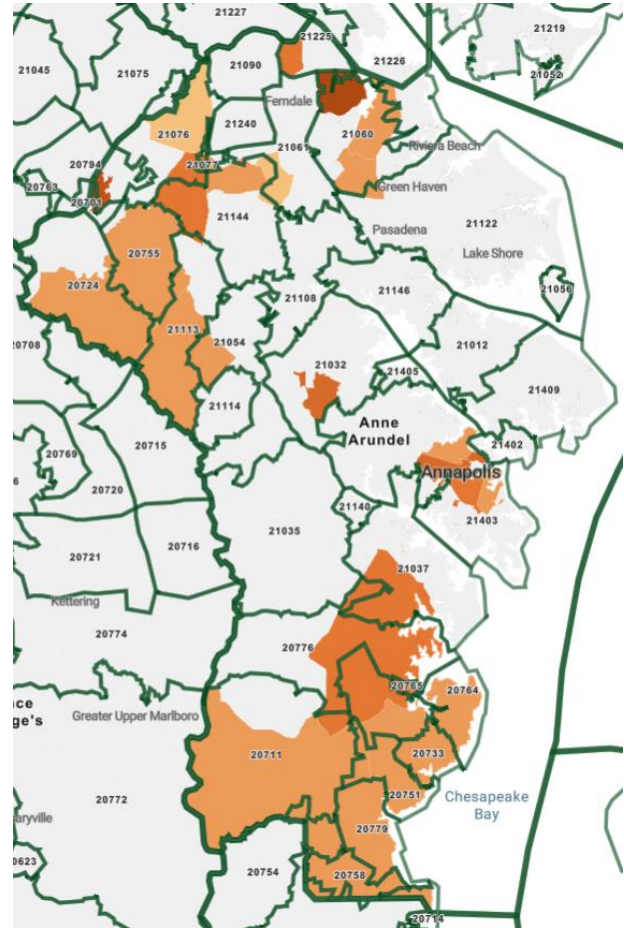

Key

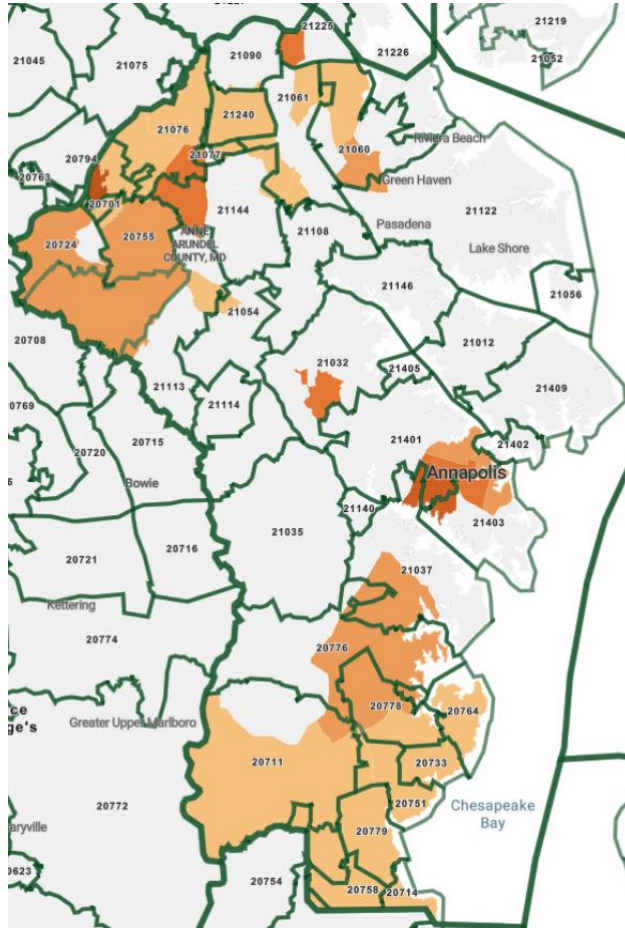

1980

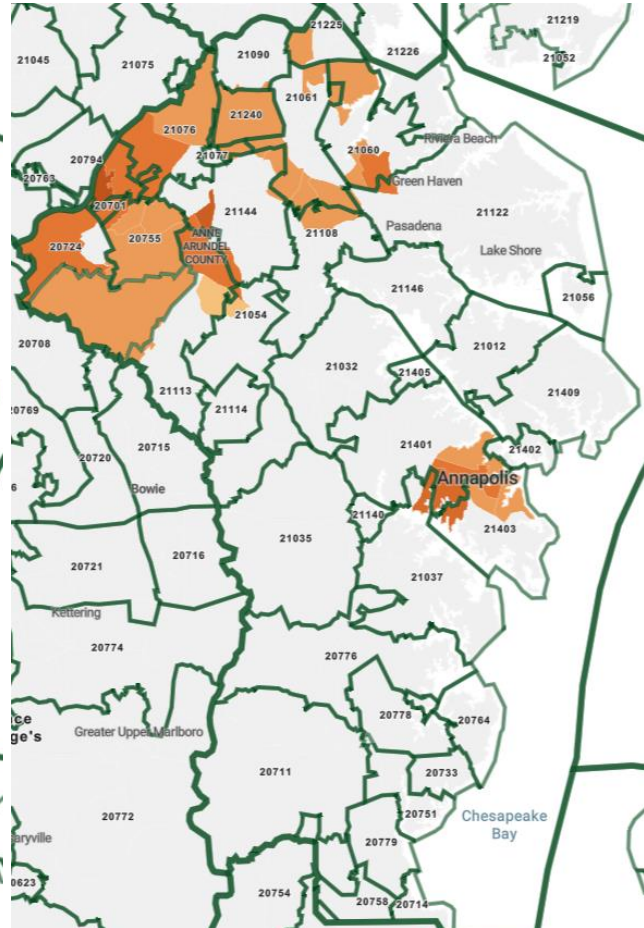

The shading of the census tracts indicates the concentration of Black households. Census tracts with lighter shading have a lower proportion of Black households and census tracts with darker shading have a higher proportion of Black households, as indicated by the key.
